

THANCHIRA MUEANGSAEN

Front-End Developer

ABOUT ME

As a third-year student at College of Computing, Khon Kaen University studying computer science, my goals are to become knowledgeable about database administration and website development. I have a strong background in Web Application Development. I'm really interested in becoming a Frontend developer and have a strong enthusiasm for Frontend work. I am actively looking for chances to contribute and advance in this sector because I am eager to develop my abilities and acquire more experience."

- GitHub (Intermediate)

EXPERIENCE

Web Developer - Online Sales Website

- Developed a robust online sales website using PHP, HTML, MySQL, JavaScript and Bootstrap.
- Implemented an intuitive admin management page to oversee product listings user accounts, and order management.
- Crafted a user-friendly storefront, enhancing the overall shopping experience.

PHP Developer - Modified Prestashop E-commerce Website

- Customized and improved a Prestashop-based e-commerce website using PHP and Docker.
- Integrated new functionalities, boosting performance and enriching the shopping experience.
- Leveraged Docker for efficient containerization and deployment.

Game Developer - Picture Matching Games

- Designed and developed engaging picture matching games using ReactJS and VueJS.
- Ensured an interactive and enjoyable user experience.

React Native App Developer - Facial Detection App

- Created a React Native app utilizing Snack.
- Implemented facial detection in real-time using the phone's camera, Camera API, and FaceDetector.

Android Application Development for Smart Farm System

- In my recent professional journey, I had the exciting opportunity to lead the development of a cutting-edge Android application utilizing Kotlin and Android Studio. This project aimed to transform traditional farming practices into a Smart Farm System, incorporating advanced data storage capabilities through Firebase.
